

LET'S WORK TOGETHER

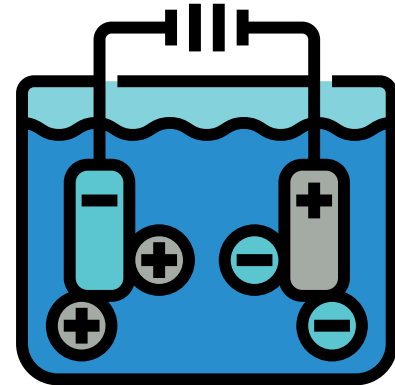

JSP enviro is a cleantech start-up specialising in Industrial effluent treatment systems. We target small and medium scale industries looking with low cost and energy efficient water treatment systems

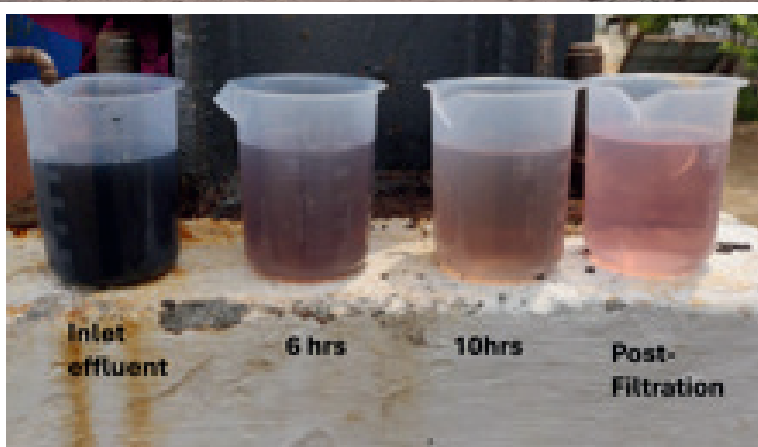

BEADS consists of a microbial fuel cell technology which is a biological process that utilizes microorganisms to degrade the organic contaminants in the wastewater and produce energy in the form of electricity.

The anode is designed with specially enriched microorganisms capable of degrading organic waste under anaerobic condition

The cathode consists of a catalyst layer to complete the circuit.

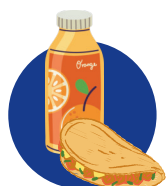

## INDUSTRIES WE CATER

PHARMACEUTICALS

TEXTILES

FOOD & BEVERAGE

DAIRY

Industries producing high COD and BOD effluent looking for cost effective treatment technology.
